Facing challenges in Ghasr-Dasht

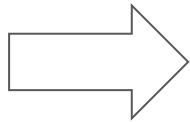

Ghasr-Dasht plays a very important role in the city of Shiraz, which means the challenges which this area is facing, can have influence on the whole city eventually. These challenges have been mentioned in the following:

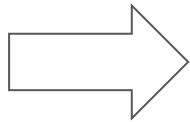

Changes of land cover characteristics

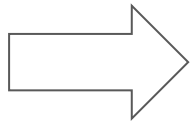

Weakening the ecological structure

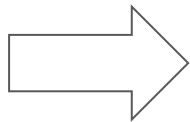

Rapid deterioration of green spaces for residential development

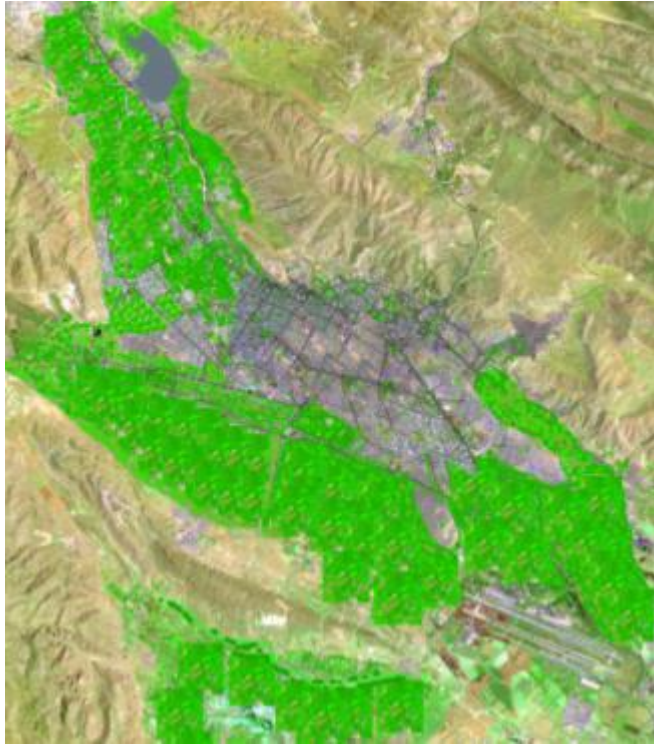

Weakening the function of the landscape

Weakening the life quality of inhabitantes

Lack of urban planning management

Shiraz green areas in 1975, Khosro
movahed

Shiraz green areas in 2000, Khosro
movahed

Suggested improvement strategies

We need to design equilibrium with nature and surrounding environment rather than against it.

To maintain Ghasr-Dasht gardens in Shiraz, we attempted to apply multi-functionality and connectivity through implementing CPUL strategy in order to have healthier society and enhance human well-being. Besides, economic and environmental benefits come with it which play a significant role.
