

# River red gums in agricultural landscapes in Victoria, Australia

*Stephen Flack, IMLA*

*HfWU, Nürtingen*

## The challenge

- Native trees are dying and not being replaced because of changed land use

## Strategy for Improvement

- Allowing natural regeneration through fencing off areas of fields from cattle, encouraged by subsidies
- Restoration in agricultural areas can include large pieces of timber, plantings of smaller native shrubs that once were commonly associated

## Strategy for Improvement

- New residential development can incorporate old trees to form the identity of the area
- Roadside trees are maintained where possible
